

## Other Scenario Gameplay

### **What is the exact order of my choices at the beginning of a scenario in terms of battle goals, ability cards, and equipped items?**

The first thing you should do when starting a scenario (after going through a Road Event when applicable), is **look in the scenario book** to get the map tiles set up, all the monsters you will be fighting prepared, and apply any negative scenario effects. Next, you should **deal battle goals** and choose one. After choosing your battle goals, then you can decide which **items** you would like to equip from the ones you own (adding in -1 cards to your attack modifier deck when applicable) and which **ability cards** you would like to start with from the pool of those you have available to you.

### **If I am forced to discard cards because of an event, when does that happen?**

Even though events happen before setting up the scenario, you should wait until you've selected your hand of cards to decide which ones to discard.

### **Does consuming items during a road event make them unavailable during the scenario?**

Yes.

### **If I have a perk that lets me ignore scenario effects, can I ignore the negative effects of event cards?**

No. You can only ignore the specific effects outlined in scenarios as scenario effects. These will be listed in the special rules of a scenario and have the format of "Do such and such **as a scenario effect**."

### **What damaging effects are modified by attack modifier cards?**

Only attacks (specified by the "Attack" keyword) are modified by attack modifier cards. Traps, hazardous terrain, retaliate, wound, and any "suffer X damage" text do not cause attack modifier cards to be drawn.

### **Are the same differentiations used when mitigating "damage from an attack" versus a "source of damage?"**

Yes, when something reduces damage from an attack (**namely, Shield**), it is specifically referring to a figure making an "Attack" and flipping over an attack modifier card. If you are reducing or negating a "source of damage," that can be anything: attacks, traps, hazardous terrain, retaliate, wound, suffering damage from choosing a different card to lose when short resting, or any other "suffer X damage" text.

### **Can you explain the difference between an unoccupied hex and an empty hex?**

An **unoccupied** hex has no figures (monsters, characters or character summons) present. An **empty** hex has no figures, tokens (money or otherwise), or overlay tiles of any kind (except corridors, open doors, and pressure plates) present.

### **Can I or one of my allies spring a trap that I lay? Can monsters spring their own traps?**

Yes, traps have no memory once you place them. They become hazards for everyone.

### **If I lay a trap on an open door, and then the door closes because of a scenario rule, what happens to**
